Examiner's Detailed Office Action

1. Claims 1 – 3, 5 – 11 and 13 – 22 are allowed.

Reason for Allowance

2. Claims 1 – 3, 5 – 11 and 13 – 22 are considered allowable since when reading the claims in light of the specification, as per MPEP 2111.01, none of the prior art of record teach or render obvious applicant's claimed invention. In particular, as pointed out below, the art lacks certain features and the combination as specified in the respective claim(s).
3. The features recited in claim 1, "a method of displaying a video signal on the display of a mobile display device, ... transmitting a signal which identifies an installation part ... receiving the transmitted signal by a receiver ... transmitting information pertaining to the installation part to the mobile display device; and automatically displaying a video signal ... in the case of the contemporaneous reception of a plurality of different signals transmitted by different transmitters of different installation parts, different priorities are automatically assigned to each of the plurality of different signals.
4. The features recited in claim 5, "a method of displaying a video signal on the display of a mobile display device, ... transmitting a signal which identifies an installation part ... automatically relaying ... signal derived from the received signal, by the mobile display device to an analysis station; ... transmitting information pertaining to the installation part to the mobile

display device; and automatically displaying a video signal corresponding to the information pertaining to the installation part ..., in the case of the reception of a plurality of different signals transmitted by transmitters of different installation parts and contemporaneously received by the mobile display device, a selection video signal is automatically displayed on the display of the mobile display device and, on the basis of this selection video signal, an operator is able to select one of the installation parts from which the received signals originate, and the signal assigned to the selected installation part, or a transmission signal derived therefrom, is the first of the received signals that is relayed to the analysis station".

5. The features recited in claim 7, "a device for displaying a video signal on the display of a mobile display device, comprising: a transmitter which is situated on an installation part ... identifies the installation part; a mobile display device ... the send and receive unit is provided for automatically relaying the received signal, or a transmission signal derived from the received signal, to the analysis station, ... receiving the information transmitted by the analysis station and the display is provided for displaying a video signal corresponding to the information pertaining to the installation part, and ... a collision recognition component which, in the case of the contemporaneous reception of a plurality of different signals from different transmitters of different installation parts, automatically assigns a different priority to each of the plurality of different signals".

6. The features recited in claim 14, "a device for displaying a video signal on the display of a mobile display device, ... a transmitter ... for transmitting a signal which identifies the

installation part; a mobile display device ... an analysis station; ... automatically relaying the received signal, or a transmission signal derived from the received signal, to the analysis station, ... automatic transmission of the information pertaining to the installation part to the mobile display device, ... the mobile display device comprises a collision recognition component ... automatically assigns a different priority to each of the received signals, and ... in the case of the reception of a plurality of different signals, provides a selection video signal which is displayed on the display; and operating elements by means of which one of the installation parts, from which the signals originate, can be selected on the basis of the selection video signal, wherein the send and receive unit of the mobile display device is provided to relay the signal assigned to the selected installation part, or a transmission signal derived therefrom, to the analysis station first”.

as mentioned above, the art lacks certain features and the combination when taken in context of the claim(s) as a whole, was not uncovered in the prior art. Moreover, the dependent claims 2, 3, 6, 8 – 11, 13 and 15 – 22 are allowed as they depend upon an allowable independent claim(s).

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments regarding Statement of Reason for Allowance”.
